

Job Posting – IT Manager

We are currently seeking an experienced professional to join our team in the role of IT Program Manager.

Responsibilities:

- Responsible for the information system projects delivery to meet our customer's business requirements within the agreed schedules.
- Conduct the system development and configuration, SIT, UAT, implementation and post-release activities with clear documentation supplemented.
- Provide the application support to production and work with business users on the query in the production application.
- Work closely with Regional/National project teams and users to provide appropriate (financial industry) IT solutions.
- Leading a team of SME (Subject Matter Expert) and engineers across different locations to deliver information system initiatives/solutions to our domestic customers.
- Add value to business by providing pro-active consultancy and expertise in IT in order to drive business agenda.
- As budget owner, monitor, report and manage budgets and expenditure, headcounts and software delivery capitalization.
- Execution of the plan and managing the risks, assumptions, issues and dependencies.
- Ensure all projects are tracked and managed using consistent standards and adhered to McRed CompuNet Inc. Project Management Framework.
- Present Program/Project status to stakeholders and coordinate remedial actions.
- Support new/ongoing improvement streams that serve to improve the performance, change process and best practices of the development team.
- Support the Head of IT as the main point of contact for business demands to the development team.
- Ensure all new demand is registered and prioritized.
- Coach and upskill team members, drive team performance, best practices, and continuous improvement.
- Work collaboratively across technology and business sectors to deliver joint outcomes.
